Stored procedures based ORM for php7

Object Relational Mapper

A **Data Mapper** is a [Data Access Layer](#) that performs bidirectional transfer of data between a persistent data store (often a [relational database](#)) and an in-memory data representation (the domain layer). The goal of the pattern is to keep the in-memory representation and the persistent data store independent of each other and the data mapper itself. The layer is composed of one or more mappers (or [Data Access Objects](#)), performing the data transfer. Mapper implementations vary in scope. Generic mappers will handle many different domain entity types, dedicated mappers will handle one or a few.

The **active record pattern** is an approach to accessing data in a [database](#). A [database table](#) or [view](#) is wrapped into a [class](#). Thus, an [object](#) instance is tied to a single row in the table. After creation of an object, a new row is added to the table upon save. Any object loaded gets its information from the database. When an object is updated, the corresponding row in the table is also updated. The wrapper class implements [accessor methods](#) or properties for each column in the table or view.

Core building principles

Stored procedures

```
CREATE
  DEFINER=`root`@`localhost`
  PROCEDURE `ValueObject_DB_PK`(IN P_ID INT)
  MODIFIES SQL DATA
  SQL SECURITY INVOKER
  BEGIN
    DELETE FROM `ValueObject` WHERE `ID` = P_ID;
  END
```

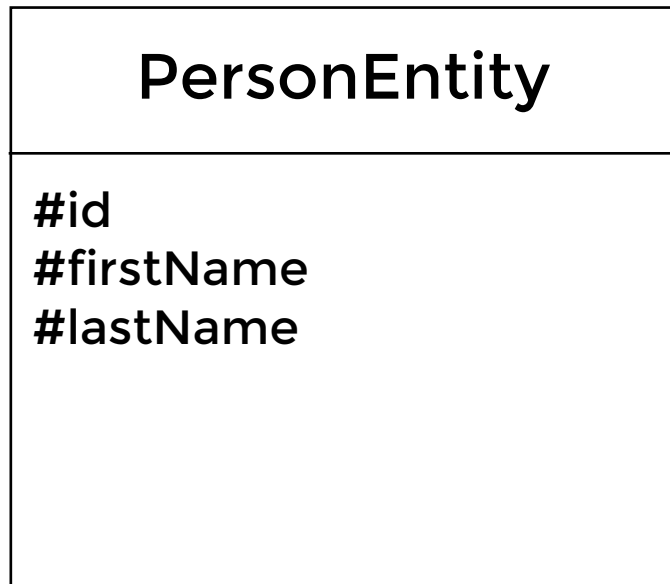

Extensibility

```
{
  "name": "Entity Generator",
  "className": "Siesta\\Generator\\EntityGenerator",
  "pluginList": [
    "Siesta\\GeneratorPlugin\\Entity\\ConstantPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\MemberPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\ConstructorPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\SavePlugin",
    "Siesta\\GeneratorPlugin\\Entity\\FromResultSetPlugin",
```

JSON/Rest Support

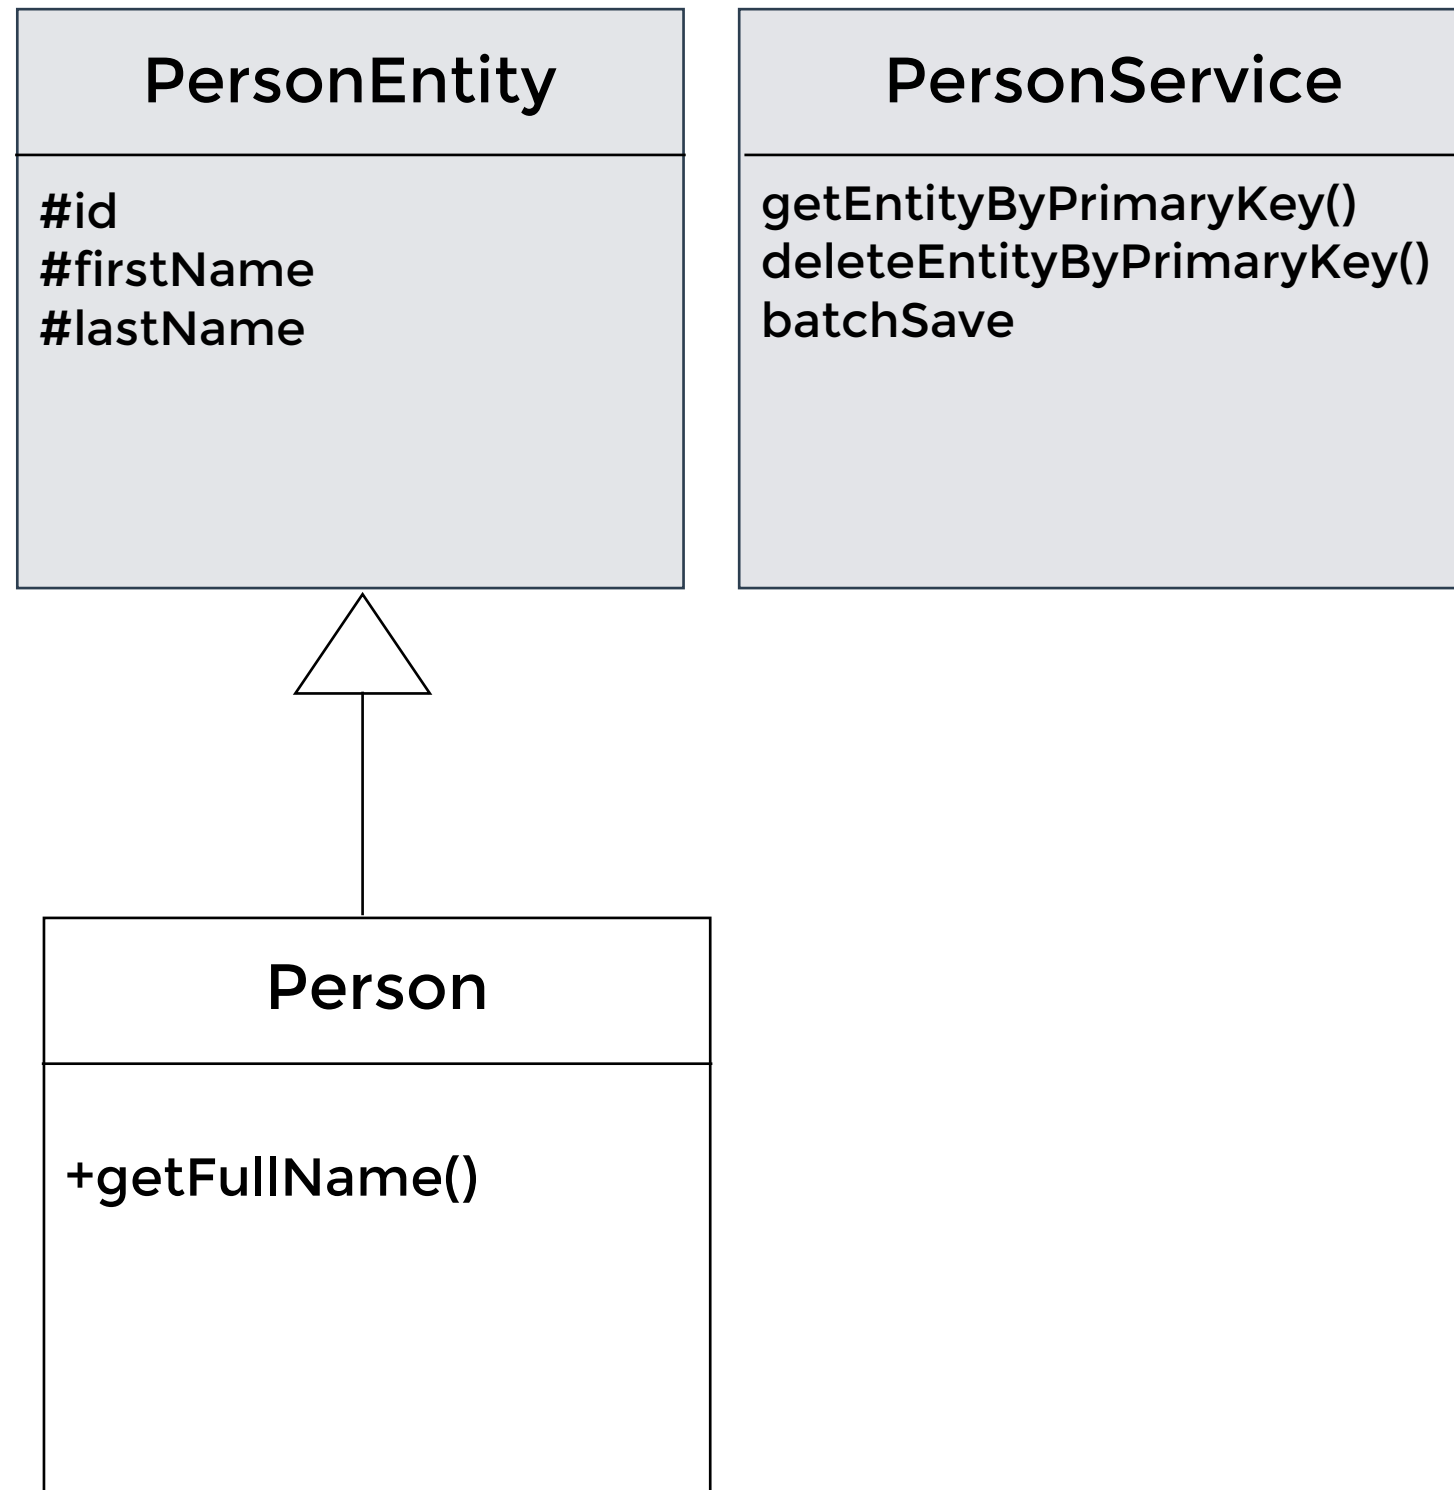

Simple Mapping

Person

id	firstName	lastName
1	Richard	Dorfmeister
2	Peter	Kruder
3	Thomas	Bangalter
4	Guillaume	Emmanuel

Generated Methods

```
public function save(bool $cascade = false, ...)
```

```
public function fromResultSet(ResultSet $resultSet)
```

```
public function getAdditionalColumn(string $key)
```

```
public function delete(string $connectionName = null)
```

```
public function fromArray(array $data)
```

```
public function toArray(CycleDetector $cycleDetector = null)
```

```
public function fromJSON(string $jsonString)
```

```
public function toJSON(CycleDetector $cycleDetector = null) : string
```

```
public function getId(bool $generateKey = false, ...)
```

Reference & Collection

```
getAddressList() : Address[]
deleteFromAddressList(int $aid)
addToAddressList(Address $a)
```

```
setPerson(Person $p)
setPersonId(int $pid)
getPerson() : Person
getPersonId() : int
```

Collection Many2Many

```
getStudentList(): Exam[]
addToStudentList(Student $s)
deleteFromStudentList(int $sid)
deleteAssignedStudent(int $sid)
```

Siesta Generator

Siesta

{MainConfig}

{GeneratorConfig}

Stored Procedures

```
<storedProcedure name="getPersonByFirstName" modifies="false" resultType="list">  
  <parameter name="firstName" spName="P_FNAME" type="string" dbType="VARCHAR(100)"/>  
  <parameter name="limit" spName="P_LIMIT" type="int" dbType="INT"/>  
  <sql>  
    SELECT * FROM !TABLE! WHERE `firstName` = P_FNAME LIMIT P_LIMIT;  
  </sql>  
</storedProcedure>
```

```
public function getPersonByFirstName(string $firstName=null, int $limit) : Person[]
```

ResultType

none

Update Statements

entity

expected 0..1 Entities

list

expected 0..n Entities

resultSet

custom queries

ResultSet

```
$resultSet = $artistService->getMyCustomList("Parameter1", "parameter2");

// hasNext() method will tell if there is another row available.
while($resultSet->hasNext()) {

    // getter allow to access row data
    // using the generated const for every column
    $isCool = $resultSet->getBooleanValue(Artist::COLUMN_IS_COOL);
    $numberOfAlbums = $resultSet->getIntegerValue(Artist::COLUMN_NUMBER_OF_ALBUMS);

    // you can also use name of a column directly
    $custom = $resultSet->getFloatValue("custom_column_name");
    $artistName = $resultSet->getStringValue(Artist::COLUMN_NAME);
    $dob = $resultSet->getDateTime(Artist::COLUMN_DOB);

}
// mandatory(!!!)
$resultSet->close();
```

Customer Generator & Plugins

Generator

Plugin

```
{
  "name": "Entity Generator",
  "className": "Siesta\\Generator\\EntityGenerator",
  "pluginList": [
    "Siesta\\GeneratorPlugin\\Entity\\ConstantPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\MemberPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\ConstructorPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\SavePlugin",
    "Siesta\\GeneratorPlugin\\Entity\\FromResultSetPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\DeletePlugin",
    "Siesta\\GeneratorPlugin\\Entity\\ArrayConverterPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\JSONConverterPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\AttributeGetterSetterPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\ReferenceGetterSetter",
    "Siesta\\GeneratorPlugin\\Entity\\CollectorGetterSetter",
    "Siesta\\GeneratorPlugin\\Entity\\CollectionManyAccess",
    "Siesta\\GeneratorPlugin\\Entity\\ArePKIdenticalPlugin",
    "Siesta\\GeneratorPlugin\\Entity\\ValueObjectPlugin",
    "SiestaDemo\\Plugin\\ToStringPlugin"
  ],
  "config": {
  },
  "validatorList": [
    "Siesta\\Validator\\DefaultDataModelValidator",
    "Siesta\\Validator\\DefaultEntityValidator",
    "Siesta\\Validator\\DefaultAttributeValidator",
    "Siesta\\Validator\\DefaultReferenceValidator",
    "Siesta\\Validator\\DefaultIndexValidator",
    "Siesta\\Validator\\DefaultCollectionValidator",
    "Siesta\\Validator\\DefaultCollectionManyValidator",
    "Siesta\\Validator\\DefaultStoredProcedureValidator",
    "Siesta\\Validator\\DefaultValueObjectValidator"
  ]
}
```

```
interface Plugin
{
    /**
     * @param Entity $entity
     *
     * @return array
     */
    public function getUseClassNameList(Entity $entity) : array;

    /**
     * @return string[]
     */
    public function getDependantPluginList() : array;

    /**
     * @return array
     */
    public function getInterfaceList() : array;

    /**
     * @param Entity $entity
     * @param CodeGenerator $codeGenerator
     */
    public function generate(Entity $entity, CodeGenerator $codeGenerator);
}
```
